

CREATING THE PERFECT MORTAR MIX

Soft building sand is a must over sharp building sand due to its cohesive properties, enabling our mortar guns to work at their very best.

The plasticiser completes the perfect mortar mix for our guns. This substance aids in the blending of the ingredients and will give you a smooth creamy texture.

When applying mortar, getting the right mix beforehand is crucial to the performance of any mortar gun. The ideal mix to get the best out of our mortar guns consists of;

3 to 4 parts sand

1 part cement

Water

Plasticiser

TOP TIP

Rub the palm of your hand with the sand, if it stains your palm orange then you have soft building sand.
